Our Only Location:

2184 E. County Road 540 A

Highland Square Plaza

Lakeland, Fla. 33813

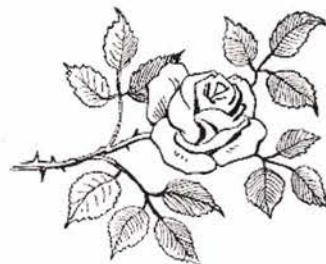

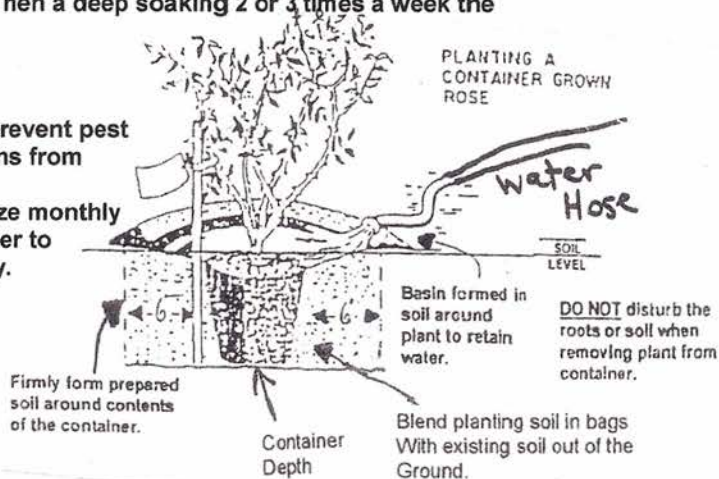

Nursery Stock Dealer #11505793

HOW to PLANT potted ROSES

1. Pick a sunny location – 6-8 hours of full sun, away from trees or shrubs, and in a rich organic well drained soil.
2. Clear entire area of grass & weeds.
3. SPACING ROSES when planting:
Hybrid Tea & Grandifloras: 3-5 ft. apart.
Floribunda & Shrubs: 2-3 ft. apart.
Climbers - need a trellis or fence 4-6 ft. apart.
4. Prepare each hole individually (container depth):
11" deep x 18" wide.
5. PETERSON PREFERENCE
Blend in the existing soil:
1/2 bag Peat Humus or Planting Soil
2 cups Rose-tone or Garden-tone Fertilizer
1 cup Limestone/ Dolomite
(Not Hydrated Lime, it will burn)
6. After mixing thoroughly.
7. WATER the rose in the pot BEFORE removing.
8. Remove rose from pot
VERY CAREFULLY. CUT POT TO REMOVE.
DO NOT DISTURB THE ROOT SYSTEM.
9. Plant rose at same level as growing in the container. Add more blended soil if need to raise the rose but keep it level with the existing soil.
10. Add remaining soil mixture around the edges and WATER while filling the hole. Firmly form prepared soil around contents of the root system of the rose.
Do Not pack around trunk area. This will cause small roots to be broken from main roots system.
11. Stake rose plant if necessary to keep wind from disturbing plant until it is established. This is especially important with roses grafted on Fortuniana Root Stock.
12. Add pine straw/ mulch 1" thick only, DON'T COVER THE CROWN AREA!
Keep pine straw /mulch away from crown.
13. Water daily for the first 3-4 weeks by soaking the entire bed or until plant is established. This could take longer if during the drought period. Then a deep soaking 2 or 3 times a week the rest of the year.

REMINDERS:

Spray weekly to prevent pest or fungus problems from occurring.
Continue to fertilize monthly with a rose fertilizer to keep them healthy.
