

# BASKET GRASS CONTROL

OR

## ANNUAL JEW GRASS

Gramineae "microstegium vimineum"

Basket Grass or Annual Jew Grass  
is in the crabgrass family.

To control this weed, do the following:

If present and growing in Bahia or St. Augustine Grass use:

### \*Garden Weasel Crabgrass Killer

This is a post-emergent herbicide for year round use and spot treatment for basket grass or other weeds that have emerged. Such as Crabgrass, Basketgrass, Chickweed, Clover and other similar weeds to name a few.

**Directions for use:** This crabgrass control works best when applied to wet grass. Applying during the a.m. hours while morning dew is present will work best or you can wet the affected area with a hose, irrigation or spray bottle.

Apply only to the affected area being careful to dust all of the weeds you want to control. This product will turn from a white to a bright yellow to indicate adequate moisture when applied. A light to medium coating applied in even strokes will work best. Noticeable results will be seen in 3 to 5 days. Do not apply if rain is forecasted for several days (48 hours) or prior to watering the lawn to avoid washing away the product. Reapply as needed.

When used properly, this product will cause very little reaction or yellowing to Bahia or St. Augustine lawns.

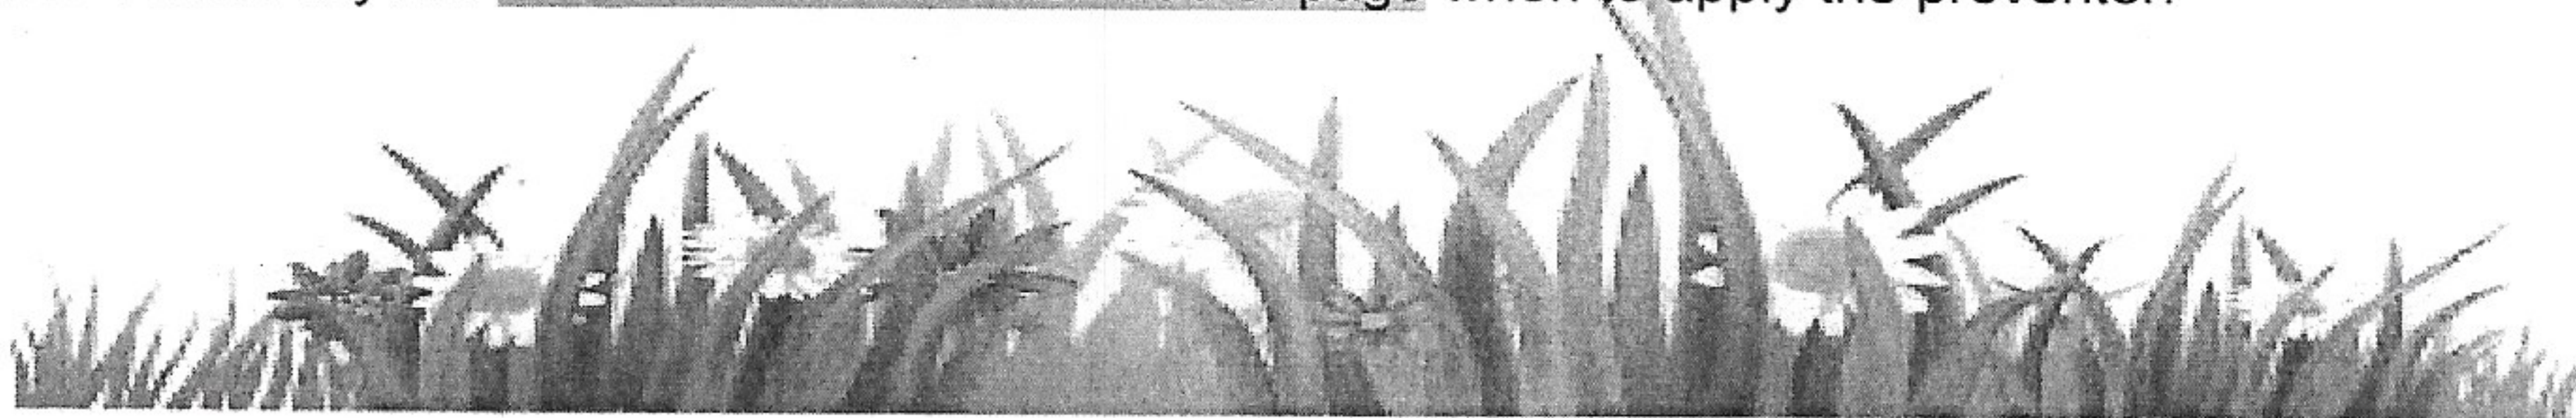

\*Active ingredient is Baking Soda. This also will work the same way.

## PREVENTER

Basket grass reproduces quickly by seed. To get ahead, start treating in winter or early spring with

### Hi-Yield Crabgrass Control

This is a pre-emergent herbicide to prevent the seed from germinating. It is recommended to make an application of the preventer 4 times a year. See Schedule on other side of page when to apply the preventer.

If present and growing in Flower Beds:

Round-up to kill the growing weeds

or

Hand pull and clean out the flower bed

Then followed by a preventer:

Dimension, Surflan or Treflan (Preen)

Use 4 times a year

Winter, Spring, Summer, Fall
